1. Summary

This document sets out the changes made to CoreBIS in this release. The release is made up the following types of updates;

1. Monthly Changes
 - a. Market Share Data
 - b. Validation / Derivation rule updates
 - c. APRA label data
2. Code updates
3. Enhancements to Existing Features
4. New Development Features
5. New Form Versions

2. Monthly Updates

2.1 Market Share

This month the following was updated;

- Monthly ADI statistics

2.2 PET Label data

A new set of PET label file are provided.

2.3 Validation / Derivation

APRA did note update the validation and derivation rules this period.

3. Code Updates

There were no code updates this month.

4. Enhancements to Existing Features

4.1 EF13: Review Java Usage

Some of the CoreBIS ETL processes use java to run some of the functions. We would like to reduce this usage, so have converted many of the calls to JAVA with standard TM1 code. While we have not managed to remove Java altogether, we have greatly reduced its use. The Validation Rules still require Java, and we have raised another card to replace that particular use case.

4.2 EF58: SQL Filesystem changes

The CoreBIS SQL Supplementary database uses stored procedure to import files from the file system. These procedures were using functions that required the user to have sysadmin rights. An alternative method has been implemented whereby these functions are not required.

5. New Features

No new features have been released this period.

6. New Form Versions

Any changes made by APRA to the taxonomy can be reviewed here;

<https://www.apra.gov.au/taxonomy-changes>

There are 6 new form versions this period;

- arf_210_3_1
- arf_210_3_2
- arf_210_4
- arf_210_5
- arf_920_4
- arf_920_5
