Table of Contents

1. Summary

This document sets out the changes made to CoreBIS in this release. The release is made up the following types of updates.

1. Monthly Changes
   a. Market Share Data
   b. Validation / Derivation rule updates
   c. APRA label data
2. Code updates
3. Enhancements to Existing Features
4. New Development Features
5. New Form Versions

2.   Monthly Updates

2.1   Market Share

This month the following was updated.

- Monthly ADI statistics

2.2   PET Label data

A new set of PET label file are provided.

2.3   Validation / Derivation

Validation and Derivation rules do not require updating this month.

3. Code Updates

3.1 CU 102: COND error if 1 condition

The recent addition of the validation rule support for COND formulas was not working correctly where the rule was a single condition. If the rule had multiple conditions the rule was working correctly. This has been fixed in this release.

3.2 CU 103: Movement / DQ report

When there is a value in current period but a 0 in previous period then the variance should be 100% not 0%. This was corrected in the Movement and DQ reports. The report was fixed to show this 100% when this situation occurs.

Raised by Nutrien.

3.3 CU 104: Read-Only feature. Security error

The new read only feature had a message error in some clients. A security access flag was added to the WF_ACTION_Set_ReadOnlyAll process.

Raised by Nutrien

3.4 CU 105: DQ Button Colour

The new forms add last month had a light blue on all the actions. The 'Recalculate' button has changed from a dark blue colour which denotes a 'global' action, to a light blue shade which denotes a 'context sensitive' action. The forms were recreated with this change.

Raised by TBML

3.5 CU 106: Validation Fails

In the APRA Validations report when the filter Result is selected as FAIL, some validations still report PASS. The formulas in the report were fixed to show only Failed validations.

3.6 CU 107: BASE_APRA_Entity dimension, wrong weighting

The code used to generate the entities have an attribute that allowed a wrong weight of (1) this was changed to 0. In some cases, this issue allowed the consolidated entities to sum the children entities.

3.7 CU 108: Review Missing Derivations in Tables

The APRA SBR definition file (xml) doesn't include some of the derivation's attributes correctly. 37 definitions were added to the database.

3.8   CU 111: AFV rollover copy process

During the mapping version process an additional flag that was introduced in the last month release in a client test case was detected to be rerunning the mapping causing a wrong instruction. This additional flag was removed reverting its previous functionality.

3.9   CU 113: ARF_720_3v7 Form

Form ARF_720_3v7 was added to the collection of forms.

3.10   CU 114: ARF_720_3v7 Derivations

Form ARF_720_3v7 derivations were added.
